

Monitor InfoPub

mod. InfoPub-32 (32")

mod. InfoPub-47 (47")

The monitor Infopub 32" and 47" is a fixed information display, designed for public environments such as offices, rail stations and shops, also the corridors and waiting rooms in airports and stations, and so this type of displays fall in the line of indoor devices.

These provide detailed information on services to users or any advertising and other ancillary information.

The requirements of these devices are essentially the aesthetics of the lines and the visibility of information.

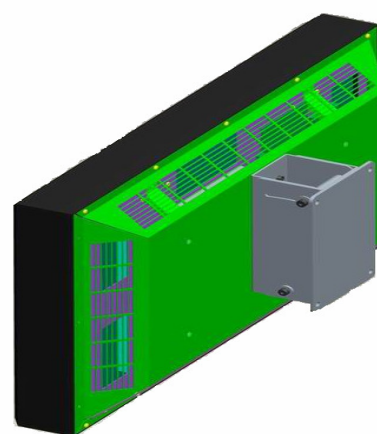

Regarding the degree of IP protection, given the environment in which it operates, does not require special protective severity, therefore the monitor has plenty of ventilation for the dissipation of heat inside.

Its structure also allows the replacement of each component very quickly to allow a reduction in the time of fault.

The optical component of the system is an LCD-TFT 32 "/ 47", 16:9, WXGA Color.
