

Informational kiosk 52"

mod. TF15-00 (STTOTEM4)

This Device, made of LCD-TFT technology is intended to provide information of various kinds for transit areas of railway stations, airports, bus, etc.. It shows informations in real time to users of the services, the state of mobility or any other ancillary information (general information, advertising).

The kiosk consists of a metal coated steel sheet and is anchored to the ground. The characteristics of these devices are, among others, the aesthetics and the ability to resist vandalism. The basic optical component of the system is an LCD-TFT 52 "WUXGA, 16:9, FULL HD-color anti-reflective safety glass.

It works in harsh environmental conditions with continuous operation H.24.

In the version for outdoor applications, the monitors ensure optimal legibility in bright outdoor lighting, through an optical processing panel with a special transfective and reflecting technology (Sunlight readable TFT-LCD technology).

Thanks to the connectivity features of the operating system and dedicated software on board, the device is able to display any type of screen graphics so as to allow their use in many areas such as web applications, animations, graphics and text.

The kiosk is equipped with devices to limit access to non-professionals, while maintaining quick access for maintenance.

Totem TF15-00 LCD-TFT 2x52"
