

Information Kiosk

mod. Totem-M53
mod. Totem-laP23

The fixed information display (Totem) is a device intended to provide information of various kinds in the areas of transit stations, airports, etc...

Information may be those detailed in real time to users on the services, the state of mobility, or any other ancillary information (general information, advertising).

The characteristics of these devices include, among others, the aesthetics and the ability of resistance to vandalism. The structure is well anchored to the ground and this helps to provide greater rigidity to the whole device.

The visualization of information goes through a LCD-TFT display with antiglare and protection glass that allow a clear view from any angle and with every condition of outdoor lighting.

Given the nature of the environments in which this device is intended to operate, have been realized an adequate protection against the entrance of dust and a cooling system for the disposal of internal heat. The structure allows quick access to internal devices. This allows to reduce drastically the timing of intervention for maintenance.

Totem-M53

Totem-laP23

Configuration	Totem M53	Totem laP23
LCD		
Technology		TFT
Diagonal	32"	23"
Resolutione max. (pixel)	1920 x1080	1920 x 1080
Brightness (cd/mq)		500
Contrast		1300:1
CONSUMPTION		
Pmax	300 W	400 W
OVERALL		
Dimensions (mm)	940 x 2242 x 200	595 x 232 x 180
WEIGHT		
Device(kg)	100	100
PROTECTION		
Grade		IP55
INTERACTIVITY		
Interactivity	With buttons or touchscreen
